LJTick-Proto

The LJTick-Proto (LJTP) consists of an 8x8 grid of holes for prototyping custom signal-conditioning ticks. The 4-pin design plugs into the standard AIN/AIN/GND/VS screw terminal block found on LabJacks such as the U3, U6, UE9, T7, and T4. Includes 3 loose pieces: the PCB, a 4-position screw terminal, and a right-angle pin header.

For more information, see [the LJTick-Proto Datasheet](#).
