500+ = \$136.80 per unit

Stock Status: In Stock

USB Multifunction DAQ

The U12 is the original LabJack. The device is solid - the firmware hasn't changed in a decade, and it has a very long service record of reliability and customer satisfaction - all with an attractive price point. It can be used for measurement and control within simple analog and digital systems. We continue to produce and sell U12s because a large number of our customers have integrated them successfully into other products.

New applications should consider the [U3 family](#) over the U12 because the U3 is faster, more flexible, and is compatible with our wide array of LJTick accessories .
